ETERNYTIME Racer

The first autonomous professional timekeeping system

made in France

Your are an Automobile, Motorbike, Motocross or Karting circuit owner?
Does your Chronelec timing system remain unused during the week and during your practice days?
Connect it to our local **ETERNYTIME Racer** server and your installation becomes autonomous and benefits all the pilots!
This service is available 7 days a week, 24 hours a day! Without intervention on your part.

Compatible transponder

The whole CHRONELEC transponder range compatible with Protime Elite, Protime and RF decoders

Chronelec Elite transponder (wired or rechargeable),
LS (wired or rechargeable)
RF, RK and RC transponder

What do I need?

1. A CHRONELEC transponder decoder (Protime Elite, Protime or RF decoder)
2. The local server unit «**Eternytime Racer**»
3. An internet connection on a Ethernet based network. A switch that connects: the decoder, the server and internet on the same network.

The local Eternytime server will manage directly the decoder. A computer and / or additional software is not necessary. The service is operational 24/7, however the "Racer" server can work in parallel during official timing.

The free smartphone app

Thanks to their smartphone and the dedicated application "**Eternytime Racer**", each driver receives his times related to the transponder number he owns or any compatible rental transponder. The results are automatically saved in the profile of each pilot. A general classification (visible from all) is available for each circuit as well as a "coach" mode, useful for team-managers who can monitor multiple pilots in simultaneous.
